

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

1. The first group of people who are interested in the study of the history of the world are the historians. They are people who study the past and try to understand what happened and why it happened. They use a variety of sources, including books, documents, and artifacts, to reconstruct the past. They also try to understand the people who lived in the past and how they thought and felt.

2. The second group of people who are interested in the study of the history of the world are the archaeologists. They are people who study the past by digging up the remains of ancient civilizations. They use a variety of tools and techniques to excavate and analyze the remains, and they try to understand how the people who lived in the past lived and what they thought and felt.

3. The third group of people who are interested in the study of the history of the world are the anthropologists. They are people who study the past by studying the people who live in the present. They use a variety of methods, including observation, interviews, and experiments, to study the people and their cultures, and they try to understand how the people who lived in the past lived and what they thought and felt.

4. The fourth group of people who are interested in the study of the history of the world are the geographers. They are people who study the past by studying the land and the environment. They use a variety of methods, including maps, globes, and satellite imagery, to study the land and the environment, and they try to understand how the people who lived in the past lived and what they thought and felt.

5. The fifth group of people who are interested in the study of the history of the world are the linguists. They are people who study the past by studying the language. They use a variety of methods, including the study of ancient languages and the study of the way that language changes over time, to study the language, and they try to understand how the people who lived in the past lived and what they thought and felt.

6. The sixth group of people who are interested in the study of the history of the world are the economists. They are people who study the past by studying the economy. They use a variety of methods, including the study of ancient economies and the study of the way that the economy changes over time, to study the economy, and they try to understand how the people who lived in the past lived and what they thought and felt.

7. The seventh group of people who are interested in the study of the history of the world are the sociologists. They are people who study the past by studying the society. They use a variety of methods, including the study of ancient societies and the study of the way that society changes over time, to study the society, and they try to understand how the people who lived in the past lived and what they thought and felt.

8. The eighth group of people who are interested in the study of the history of the world are the psychologists. They are people who study the past by studying the mind. They use a variety of methods, including the study of ancient minds and the study of the way that the mind changes over time, to study the mind, and they try to understand how the people who lived in the past lived and what they thought and felt.

9. The ninth group of people who are interested in the study of the history of the world are the biologists. They are people who study the past by studying the life. They use a variety of methods, including the study of ancient life and the study of the way that life changes over time, to study the life, and they try to understand how the people who lived in the past lived and what they thought and felt.

10. The tenth group of people who are interested in the study of the history of the world are the chemists. They are people who study the past by studying the matter. They use a variety of methods, including the study of ancient matter and the study of the way that matter changes over time, to study the matter, and they try to understand how the people who lived in the past lived and what they thought and felt.

11. The eleventh group of people who are interested in the study of the history of the world are the physicists. They are people who study the past by studying the energy. They use a variety of methods, including the study of ancient energy and the study of the way that energy changes over time, to study the energy, and they try to understand how the people who lived in the past lived and what they thought and felt.

12. The twelfth group of people who are interested in the study of the history of the world are the astronomers. They are people who study the past by studying the universe. They use a variety of methods, including the study of ancient universes and the study of the way that the universe changes over time, to study the universe, and they try to understand how the people who lived in the past lived and what they thought and felt.

13. The thirteenth group of people who are interested in the study of the history of the world are the environmental scientists. They are people who study the past by studying the environment. They use a variety of methods, including the study of ancient environments and the study of the way that the environment changes over time, to study the environment, and they try to understand how the people who lived in the past lived and what they thought and felt.

14. The fourteenth group of people who are interested in the study of the history of the world are the medical scientists. They are people who study the past by studying the health. They use a variety of methods, including the study of ancient health and the study of the way that health changes over time, to study the health, and they try to understand how the people who lived in the past lived and what they thought and felt.

15. The fifteenth group of people who are interested in the study of the history of the world are the social scientists. They are people who study the past by studying the society. They use a variety of methods, including the study of ancient societies and the study of the way that society changes over time, to study the society, and they try to understand how the people who lived in the past lived and what they thought and felt.

THE  
GOVERNMENT ANNUITY TABLES,  
EMBRACING THE VALUES OF  
ANNUITIES ON SINGLE AND TWO JOINT LIVES,  
AT 3, 4, 5, & 6 PER CENT. PER ANNUM,  
FOR EVERY COMBINATION OF AGE AND SEX;

FOUNDED UPON THE ACTUAL EXPERIENCE OF THE BRITISH GOVERNMENT TONTINES  
AND LIFE ANNUITIES, ACCORDING TO THE ORIGINAL OBSERVATIONS OF THE  
MORTALITY OF ALL THE NOMINEES, FROM JULY 1693 TO OCTOBER 1695,

*As contained in the Report of John Finlaison, Esq., Actuary of the National Debt, to the Lords Commissioners of the  
Treasury, ordered by the House of Commons to be Printed 31st March, 1829.*

BY  
JARDINE HENRY,  
FELLOW OF THE ROYAL SCOTTISH SOCIETY OF ARTS.

IN TWO VOLUMES.

VOL. I.

# CONTENTS.

## VOLUME I.

### I. PREFACE.

	PAGE
On the length of human Life, according to Observations, - - -	v
Explanation of plan on which Tables calculated, - - -	vii
General Remarks on the Government Annuity Tables, and comparison with other Tables. - - -	ix
Formulae applicable to Annuities and Assurances, and their derivation, -	xiii
Practical Applications of the Formulae, - - -	xvi
Table of Formulae for Annuities, Assurances, and Annual Premiums, -	xix
Numbers, with their Logarithms and Complements, much used in Calculations, - - -	xxii

### 2. GOVERNMENT ANNUITY TABLES.

Value of Annuity of One Pound per Annum.

3 per Cent. Interest.

MALE LIFE.	
A Single Life, - - - - -	1
Two Joint Lives, - - - - -	2
MALE (ELDER) AND FEMALE LIFE.	
A Single Female Life, - - - - -	45
Two Joint Lives, - - - - -	46
MALE (YOUNGER) AND FEMALE LIFE.	
Two Joint Lives, - - - - -	69
FEMALE LIFE.	
Two Joint Lives, - - - - -	135

Value of Annuity of One Pound per Annum.

4 per Cent. Interest.

MALE LIFE.	
A Single Life, - - - - -	185
Two Joint Lives, - - - - -	186
MALE (ELDER) AND FEMALE LIFE.	
A Single Female Life, - - - - -	229
Two Joint Lives, - - - - -	230
MALE (YOUNGER) AND FEMALE LIFE.	
Two Joint Lives, - - - - -	273
FEMALE LIFE.	
Two Joint Lives, - - - - -	319

III. **HABITS.**—Taking these to include not only the particular mode of life of the individual, but also his employment, the length of human life is very considerably affected by this cause. Many statements of the length of life in different classes of communities have been made, and all the results vary materially. It is sufficient to say here, that habits appear to be an equally powerful agent in creating dissimilarities as climate is known to be.

IV. **IRREGULAR CAUSES.**—These may be considered uniform, from the countervailing effects produced by their great number, and the tendency, in a large number of irregular causes acting irregularly in all directions, to produce a uniform action.

We leave out the effects of pestilence, being so rare, and, excepting perhaps cholera, not requiring to be estimated.

Taking now the **GOVERNMENT ANNUITY TABLES**, or rather the Observations of human life from which they have been derived, we find only two causes calculated to create irregularities in them, viz. :—**CLIMATE—HABITS.**

With reference to the first, it is believed that there can be no great differences, the Annuitants and Tontine Nominees living mostly in this country.

Of habits more may be said, perhaps, but even here it is found that the variation could not be great so far as arising from class, because almost all the parties whose lives were subjected to observation belonged to the wealthier classes, although, of course, great differences might arise in respect of one individual and another, from their several modes of life being less or more conducive to longevity.

Upon the general qualities of the elements of these Tables, it may be observed—

1. That the accuracy of the ages, whether recorded at entry to the particular scheme or at death, is unquestionable—the interests involved requiring and enforcing, under the eye of Government officials, the most perfect correctness in these details.

2. The Tables are free from disturbing elements operating against their adaptation to the purposes for which they are intended. There is no difference of climate or condition; and as regards employment, from the station in life of the parties, there could be no important variances in that respect.

3. There is no emigration or immigration, excepting what is rigidly ascertained, not only in individuals, but also in sexes and ages.

4. The number of lives involved is sufficient for practical purposes, and exceeds those embraced either by the Northampton or Carlisle Tables.

It may be thought that the Registrar-General's Tables would furnish more reliable results, owing to the great number involved. But it is well known that the Registrar-General's Tables exhibit the most marked variations, when we take different classes of those subjected to observation.

Again, we do not necessarily attain greater accuracy by embracing larger numbers, unless there be a corresponding accuracy in the details; and all the care of Enumerators and District Registrars may be baffled in numerous cases by parties not knowing or not choosing to give their true ages, or giving them erroneously,—there being little or no check upon this.

Emigration and immigration also operate to an extent that calculation may attempt to cope with, but, until very lately at least, with very uncertain results. And, after all, a medium life is obtained which may not represent the true average of existence among the classes which have to do with annuity transactions.

It is satisfactory, however, to be able to state that the difference between the average value of Annuities deduced by the two sets of Tables is immaterial, and any one trying the comparison for the age of 40 in the case of a male and a female, at 4 per cent. interest, will find that the discrepancy of value is less than one-quarter of a year's purchase.

So close a coincidence between the results of the two sets of Observations affords a strong proof of the accuracy of both investigations, and shews that facts ascertained with rigid exactness on a comparatively small scale (the deaths in the Tontine schemes of the Government being but 10,077) do nevertheless nearly coincide with results obtained on a scale of great magnitude, although, in the latter case, strict accuracy was, in some particulars, wholly out of the question.

Some Actuaries may think that the Work should have been presented in the form of Commutation Tables. It is to be considered, however, that to make it capable of being consulted by the Man of Business, and the Merchant, as well as by the Professional Accountant and Actuary, it was necessary to give the actual values of Annuities for the whole period of life. A disadvantage thus arises from the trouble that will be occasioned in ascertaining the value of short period and deferred Annuities, but these are believed to be rare cases comparatively, and the benefit of having the money results for the complete duration of life presented in an accessible form, will, it is believed, more than counterbalance the additional trouble occasioned to the Actuary by the want of the Commutation form.

Of the Tables selected by Mr FINLAISON for the use of the Government, much does not require to be said.

They exhibit the highest results in length of life, and were adopted on that very ground. But the Actuary who aims at correctness must be guided by the *whole* experience of the schemes, and not by a *part*.

The Tables have been wrought out on Mr MILNE's system,—that of BARRERT, though admirable, being not so well adapted for Joint-Life Tables on account of the multiplicity of figures to which it gives rise. The logarithms were also worked only to five places throughout, but the results of one or two Tables

wrought to seven places were compared with these, and the difference, even when the integer was 23, was found not to amount to more than 2 or 3 in the third place of decimals.

In other cases, of course, the approach to perfect accuracy must be much nearer.

Some may be disposed to think that greater exactness was required, and that the figures should have been brought out correct to the third place of decimals throughout.

If it is considered, however, that the best *Tables* of human life do not coincide even in the number of years assigned, *i.e.*, in the place of integers, it seems superfluous to insist upon the working out of a set of *Tables* to the accuracy of the third place of decimals. Stating the matter more popularly—in comparing average observations with each other, we differ by as much as a *unit* or more—what necessity exists, therefore, that the calculations in the particular *Tables* shall be carried to the correctness of the three-hundredth or five-hundredth part of a *unit*. In reality, however, the *Tables* being wrought out upon a uniform plan, the general accuracy is, reckoned altogether, much closer than that stated above, and the error may be held to be less on the average than 1 in the third place of decimals.

The advantage of shewing the joint duration of the lives of men and women in pairs is evident.

The variations in value arising from difference of sex have thus been brought out, it is believed, for the first time, in a set of *Tables* of the extent of this Work.

Thus every monied interest dependant upon the joint existence and survivance of Husband and Wife, Parent and Child, Brother and Sister, can be at once accurately ascertained.

It is hoped that the arrangement of the *Tables* will be found convenient, and that the different colours used to distinguish the per-centages will tend to preserve accuracy in consulting the Work.

The numerous distinct sections created by the separate values given for Male Life and Female Life, and the binary combinations of the Lives made a distinct heading necessary for each section. It appeared to be too much, therefore, to throw the direction of the proper place of, for example, the 3 per cents. upon the heading alone.

In consequence, the *pink*-coloured paper was adopted to distinguish the 3 per cent. rate.

The same remarks apply to the others in their order, *viz.*, the colour of the paper of the 4 per cent. rate being *green*—of the 5 per cent. rate, *blue*,—and of the 6 per cent. rate, *yellow*. The pages commencing with 3 per cent., and terminating with 6 per cent., also run in the order of the per centages.

The octavo size has been adopted from its portable form. Any necessity for ascertaining the difference of age has been obviated by the age of the younger being made the standard of reference,

and forming a constant in every separate Table, while the age of the elder is given from age 1 to the highest age attained. The age 0, (at Birth), with its combinations, will be found in the Appendix. It has been supplied from the English Life Table, No. 1, of the Registrar-General.

It is hoped, on the grounds already stated, that the Work will be found useful, both to professional men and to the public.

When one considers the great progress made in this country in the correct appreciation of the duration of human life since the publication of the Northampton Tables by Dr Price, in the last century, and also that the Carlisle Tables were welcomed as a nearer approximation to the truth, it may be thought that the time has arrived for the publication of a complete Work on Annuities, founded on a better basis, and it will give the Author much satisfaction if the public should be of opinion that the desideratum has been supplied by the present Work. No pains have been spared to render the Tables accurate in all respects.

The basis has received the approbation of Actuaries of the first eminence,—but to enable those who are inclined to take the trouble to form a judgment of the value of the basis as compared with other Tables of a similar nature, there is appended, along with other Tables, a statement of the mean duration of human life by six distinct series of observations of the most authentic character, including the Tables on which this Work is founded, and applicable to Males and Females separately.

From these it will be seen that, for the ages given, the Males of the English Life Table, No. 1, are better on the average than those of the Government Annuity Tables by three-quarters of a year, (strictly  $\cdot 74$  of a year), while the Females of the English Life Table are worse than those of the Government by an year and a half, (strictly  $1\cdot 48$  years).

While such discrepancies are to be regretted, it is thought that they are not such as to create any surprise; the remarkable point being that the two Tables should coincide so closely.

In reference to the much vexed question of the superior longevity of Females, compared to Males, it will be found that the difference assigned by the Government Annuity Tables, on the average of the ages embraced by the Tables in question, is nearer, proportionally, to the general average than the difference assigned by the English Life Table, No. 1—the general average difference being  $1\cdot 74$  years; while the Government Annuity Tables assign  $3\cdot 05$  years as the difference, and the English Life Table, No. 1, gives  $\cdot 90$  of a year only.

Applied to Annuitants—(bearing in mind the undisputed fact, proved by the Registrar-General's Returns, that Females attain in the great majority of cases to the highest ages, as compared with Males), the Government Annuity Tables appear to be in this respect preferable to the Tables framed from the English Life Table, No. 1. The too low pitching of the latter Table, as

regards Female existence, may be owing to a cause likely to affect every investigation of the same nature, viz., the disposition of a large class of Females to understate their ages, resulting in the length of life of Females being given, in the Registrar-General's Tables, as less than it really is.

On comparing the six Tables with each other, as regards the difference of Male and Female Life, it is obvious that the latter is longer in duration, according to all the Tables, excepting that of Demonferrand. This latter was compiled only from deaths—a mode of forming Tables that is open to serious objections. As regards general results, the Male Table that approximates nearest to the average is the British Government Aggregate. The Female Table nearest the average is that of Demonferrand; and very near to the latter are, Deparcieux, and the Swedish Tables. The three highest Male Tables are, the English Life Table No. 1, Demonferrand, and the British Government Aggregate. The three highest Female Tables are the British Government Aggregate, the English Life Table No. 1, and Demonferrand.

The English Life Table No. 1, and the Montpellier Table, both for Females, bear a close resemblance to each other from the age of 10 inclusive and upwards. The deaths in the Montpellier Table occurred before 1792, and the coincidence may justly be considered as remarkable.

In comparing the Males of these two Tables for the same ages, we find that the English Life Table gives an average duration of about two years more than the Montpellier Table.

The Tables for Males are much closer to each other than the Tables for Females. The greatest difference between the average for Males and any Male Table being (on summation, from 20 to 90 inclusive,) 1.06 years, in which the average is *plus*, and for Females, 1.36 years, in which the average is *minus*.

The extreme difference between Males and Females, for the given ages, is 3.87 years, being the difference between Deparcieux's Monks and the British Government Females.

As regards the correction which may appear to be required upon the Female Life in the Registrar-General's English Life Table, No. 1, a method is open which is liable to little objection unless the sexes, in emigrating, have left the kingdom,—the Males in much greater numbers than the Females.

It may be stated thus: Let us take the number of the population as at 7th June, 1841, for England and Wales, the Islands in the British Seas, the Army and Navy. Let us supply the number of Females that should have existed, if the Female Births had been equal in number to the Male Births. This may easily be done by taking the proportions of the Males and Females born in 1839, 1840, 1841, and 1842, from the Registrar-General's Sixth Report (page 13). Let us then assume that the Mean Duration of Males is proportional to the number of Males alive by the Census return of 7th June, 1841, and that the Mean

Duration of Females is derivable, proportionally, from the number of Females alive according to the same Return. The number of Males and Females respectively alive at 7th June, 1841, is :— Males, 8,023,457; Females, 8,203,986. The Births of Males in 1839, 1840, 1841 and 1842 were 1,037,441. The Births of Females were, 987,333, and the excess of Male Births was thus 50,108. Then proportionally—1,037,441 : 50,108 :: 8,023,457 : 387,540 ;—and adding the last proportional to the number of Females alive at 7th June, 1841, 8,203,986, we have 8,591,526 as the number of Females that would have been alive at 7th June, 1841, had the Female Births been equal to the Male Births. Correctly, the number should be greater, because the assumption is that the numbers of Males and Females are increased proportionally to the numbers born, say  $x$  Males, and  $y$  Females, which leave on 7th June, 1841, of Males, 8,023,457, and of Females, 8,591,526. and that the decrease of the Females is at the same rate with that of the Males, while the fact is, that the decrease is slower. But on the above data we arrive at the conclusion that the mean life of Females in England, instead of being, for all ages, 22·219 according to the English Life Table No. 1, is at least 23·095. Thus—the Males, 8,023,457, are to the Mean Life for all ages of Males by the English Life Tables, No. 1, 21·568, as 8,591,526 is to 23·095. The true difference in favour of Females, of the Mean Duration of Male and Female Life, by the English Life Table, No 1, on the foregoing footing, is therefore 1·53 years.

By the British Government Aggregate Tables the Mean Duration of Males for all ages is 22·34 years, and of Females 23·75 years, and the difference in favor of Females is 1·41 years. The English Life Table, No. 1, thus makes the difference between the Mean Duration of Male and Female Life greater by ·12 of a year than the British Government Aggregate Tables.

If we limit the comparison to the Average Mean Duration by the English Life Table up to age 95, then the Mean Life for all ages of Males up to 95 is 23·211, and by the above process we obtain for Mean Duration of Females up to same age, 24·854, making a difference in favour of Females of 1·64, which is greater by ·23 of a year than that by the British Government Aggregate Tables.

The objection to the above results that arises from the fact that more Males emigrate than Females, is counteracted by the effect of the assumption of the equal decrease of Females as compared to Males. The extent to which it is counteracted, whether fully or partially, cannot be precisely ascertained from want of data. According to the Returns of the Emigration Board Commissioners, referred to in Enumeration Abstract, 1841, page 11, the number of Emigrants from the Ports of England and Wales during 7 years from 1825 to 1831, was 103,218; and during 10 years from 1832 to 1841, the number was 429,775,

making a total of 532,993 in 17 years. Calculating from the proportion for the 7 years to 1831, we have 117,963 as the number of emigrants for the 8 years to 1835, and 650,956 as the total number of emigrants for 25 years to 1841.

Supposing, then, three-fourths of the emigrants were Males, then the Female emigrants during that period would be 162,739, and the Males, 488,217. Referring now to the Returns of the Census of 7th June, 1841, for England and Wales, we find that the number of years that have been lived over by the Population of Males—Census Return 1841, Age Abstract, page 47—is about 225,000,000, and that, had the Male Population consisted exclusively of Persons of 25 years of age, the number of years lived over by them would have been nearly the same with the above. Referring then to the English Life Table No. 1—5th Annual Report of the Registrar General, page 17—we find on the footing of an equal number of Males and Females born, that at the end of 25 years there would be 32,976 Females alive, and only 31,958 Males, the excess of Females being thus 1,018. Applying these proportions to the number of Females brought out as alive at 7th June, 1841, on the supposition of equal births, we find that the proportion of Females alive at 7th June, 1841, should have been increased by 273,680.

We have found on assumption, that the excess of Male Emigrants during the 25 years to 1841 was 325,478, which does not differ much from the above; and therefore it may be held generally that, even on the assumption that 3 Males emigrate for every Female, the results derived from the Male population as applied to the Mean duration of Females, are correct.

With reference to the mode in which the following Tables have been calculated it has already been remarked that the system adopted was that of MILNE, and using logarithms for the arithmetical processes.

The first step was to write the logarithms of the probabilities of surviving one year at each age on slips ruled equally, and leaving one line blank between each logarithm. Other slips were then prepared, having each alternate space cut out, and upon the spaces left were written the addition of the above logarithms and the logarithm of the value of One Pound to be received one year hence at 6 per cent. per annum. The one slip was then fitted upon the other, and the addition of the two for difference of age 0 read off and tabulated by an amanuensis in a volume prepared for the purpose. The common difference between 6 per cent. and 5 per cent. was then added to the results, and a second column formed in the volume—a third column was formed by adding to the numbers in the second column the common difference between 5 and 4 per cent.—and a fourth column similarly formed exhibited the logarithms of the probability of living one year at each age added to the logarithms of one pound to be received one year hence at 3 per cent.

This last column was checked by a new set of slips bringing out the proper logarithms independently. The same method was pursued in a duplicate volume—and the probabilities for 3 per cent. were similarly checked. Finally, the two volumes were compared as regards the 3 per cent. column. The same mode was adopted for the differences 1, 2, 3, &c, to the end of the Tables. The Tables were then wrought out by the author and another experienced calculator—and the results verified at each stage of 5 values.

The accuracy with which this was accomplished, being sometimes a difference of only 1 in 800 values, leaves little ground for the supposition of any error.

The Tables were copied from one duplicate, and the printed proof was compared with the other duplicate.

Finally, the full printed Tables were re-compared with a duplicate, and any small errors that were found were rectified.

The Tables, in being printed, were occasionally put up with a single error in 8 pages, and this with the subsequent careful correction, gives reason to believe that no errors of any consequence have slipped into the print.

It only remains to give the Formulæ, that will be found useful in solving practical questions by means of the Tables, and a few examples of the way in which these Formulæ are applied.

The Value of an Annuity on a Single or Two Joint Lives is found directly from the Tables.

The next question that naturally arises is the value of an Annuity on the longest of Two Lives A and B.

This is evidently the value of an Annuity on each of the lives A and B, less the value of an Annuity on their Joint Lives. We reckon £1 per annum receivable by A, and £1 per annum receivable by B, and we deduct £1 per annum so long as they both continue in life.

We have thus, as the Value of such an Annuity,  

$$A + B - A \text{ B.}$$

For the longest of three lives we take the Value of an Annuity on each of the Single Lives, A, B, and C, and deduct the value of Annuities during the time that A, B, and C are jointly in life—that is, A B, A C, and B C. As the Annuity is payable also during the time that all three are jointly in life, a period comprehended in the periods of joint existence of A B, A C, or B C, which have been deducted, we add the value of the Annuity for the three lives A B C.

The Value of an Annuity on the longest of Three Lives is thus :—

$$A + B + C - A \text{ B} - A \text{ C} - B \text{ C} + A \text{ B C.}$$

For the longest of Four Lives, we take, similarly, the Value of an Annuity on each of the Single Lives, A, B, C and D, and deduct the Value of Annuities during the time that A, B, C and D are jointly in life—that is, A B, A C, A D, B C, B D, C D. As the

Annuity is payable during the period that any three of the four are in life, a period comprehended in the periods of joint existence of A B, A C, A D, B C, B D, and C D, we add the Value of Annuities payable while any three are jointly in life, viz., A B C, A C D, B C D, A B D. Again, the period of joint existence of all the four being comprehended in the periods of triple existence above given, and also in the periods of single existence already taken, we deduct the Annuity for such joint quadruple existence A B C D.

The Value of an Annuity on the longest of Four Lives is thus :—

$$A+B+C+D-A B-A C-A D-B C-B D-C D+A B C+A C D+B C D+A B D-A B C D.$$

It is unnecessary to pursue this subject further, in the way of practical use, and the general formula may, if required, be referred to in Mr MILNE'S *Treatise on Annuities, &c.*, p. 126.

Following the natural order of the Formulæ, we take the case of an Annuity payable to one person, A, after the decease of another person, B. This is evidently the value of an Annuity on the life of A less the value of an Annuity on the joint lives A B, or  $A-A B$ .

We take the value of an Annuity on the life of A, but as it is suspended so long as B continues in life along with A, we deduct A B, the value of an Annuity on the joint lives.

Similarly in the case of an Annuity payable during the joint lives of A and B, after the decease of C—we take the value of an Annuity on the joint lives A B, and deduct the value of an Annuity on the joint continuance of the lives A, B and C; which is  $A B-A B C$ .

Again, the value of an Annuity payable on the life of C, after the termination of the joint existence of A and B, is the value of an Annuity on the life of C less the value of an Annuity payable during the joint existence of A, B and C; which is  $C-A B C$ .

The value of an Annuity payable on the life of A, after the decease of the survivor of B and C, is evidently the value of an Annuity on the life of A less the value of an Annuity on the longest of the two lives, B and C, combined with it. For if we had a single life exactly equal to the longest of the two lives in question, B and C, say D, we would be conducted to the same result as in the case of an Annuity payable to A after the death of D, which is  $A-A D$ . But D is equal to  $B+C-B C$ . Therefore the value of the Annuity sought is

$$\begin{aligned} &A-(A B+A C-A B C) \\ &=A-A B-A C+A B C. \end{aligned}$$

Take, then, the case of an Annuity payable during the life of the survivor of B and C, after the decease of A. If we had a life equal to that of the survivor of B and C—say D, then, on the preceding reasoning, the Annuity sought would be  $D-A D$ . D, however,

is equal to  $B + C - BC$ ; and, substituting this last in the preceding expression, we have as the value of the Annuity sought,

$$B + C - BC - AB - AC + ABC.$$

For a strictly algebraical demonstration of the above, see Mr MILNE's Treatise, p. 131.

In the case of four lives, A, B, C and D, the value of an Annuity, payable on the life of D after the decease of the longest liver of A, B and C, may be similarly shewn.

For, suppose the longest liver of A and B to be equal to E, then we have as the value of the Annuity required,—

$$\begin{aligned} D - (DE + DC - DEC) = \\ D - DE - DC + DEC. \end{aligned}$$

But E is equal to

$$A + B - AB.$$

And substituting this in the room of E in the above, we have, as the value of the Annuity required,

$$\begin{aligned} D - AD - DB + DAB - DC + DCA + DCB - DCA B - or \\ D - AD - BD - CD + ABD + ACD + BCD - ABCD. \end{aligned}$$

The above, it is thought, may suffice for illustration of the uses of the Tables as regards Annuities. The standard Works of MILNE, BAILY, DAVID JONES, and others, will furnish many other applications of the Tables to practical purposes, and are, therefore, referred to for further examples.

It may be proper now to shew the use of the Tables as regards Life Assurance.

Mr MILNE has given at p. 167 of his Treatise, the mode of deriving the value of a sum assured from the value of an Annuity.

As it may be satisfactory to present the deduction of the one from the other in a brief form, we shall accordingly give it.

The value of a perpetual Annuity of £1 per Annum, or what is called the perpetuity of an Annuity of £1 per Annum, is represented by  $\frac{1}{r}$ ; r being the interest of £1 for 1 year.

The present value of the reversion of such Annuity, after the extinction of any life, is evidently  $\frac{1}{r} - A$ ; where A is the value of an Annuity on any life.

A party entitled to the reversion of such an Annuity would, on the expiry of six months (on the average) from the death of the Annuitant, receive £1, and enter upon the possession of a perpetual Annuity of £1 per annum, the equivalent of which in  $\frac{1}{r}$ . This is the same thing as receiving  $1 + \frac{1}{r}$  pounds upon the expiry of six months from the death of the Annuitant, and is, in fact, an assurance of that sum upon the life of the Annuitant, payable six months after his death. The present value of such an assurance is, as we have seen,  $\frac{1}{r} - A$ .

In order to find the value of £1 payable on the death of any person, which we shall call p, we have therefore only to proceed according to the rules of proportion, thus:—

$$\begin{aligned} \frac{1-A}{r} : 1+\frac{1}{r} :: p : 1; \text{ or} \\ \frac{1-A}{r} : \frac{1}{r} :: p : 1; \text{ or} \\ 1-A : 1+r :: p : 1; \text{ hence} \\ p = \frac{1-A}{1+r} \quad \text{say} \quad \frac{1}{1+r} = v; \end{aligned}$$

$$\begin{aligned} \text{Then we have } p &= v - v A r = v (1-A) = v (1+A-A r-A) \\ &= v [1+A-(1+r) A] = \frac{1+A}{1+r} - A = v (1+A) - A = v + v A - A \\ &= 1 + v + v A - A - 1 = 1 - (1-v) - (1-v) A = 1 - (1+A)(1-v) \\ &= 1 - (1-v)(1+A). \end{aligned}$$

The last is the most convenient Formula, and we will therefore make use of it in the illustration

The present value of £1, payable upon the death of any person is therefore  $1 - (1-v)(1+A)$ .

The present value of £1, payable upon the termination of the joint existence of two lives, A and B, is similarly  $1 - (1-v)(1+A B)$ .

The same mode of substitution holds for every case of joint existence, whatever be the number of lives, as proved by Mr MILNE, p. 167 of his Treatise.

Let us now take the case of the present value of an assurance on the longest of two lives, A and B; this becomes  $1 - (1-v)(1+A+B-A B)$ .

Again—in the case of an assurance on the longest of three lives, we have as the present value,  $1 - (1-v)(1+A+B+C-A B, -A C-B C+A B C)$ . In the same manner we may have the present value of an assurance on any lives, or the longest of them, or the survivors out of so many, by substituting, in the general expression, as given by Mr MILNE,  $v - (1-v) \frac{1}{1+A B C}$ ; or, as deduced above,  $1 - (1-v)(1 + \frac{1}{1+A B C} \&c.)$ , the value of an Annuity for the proper contingency.

It appears unnecessary to pursue this subject farther, and we shall therefore refer to the works before-mentioned, and to the Formulæ appended to the Preface, for other cases.

It may be as well, however, to give one or two examples, in figures:—

Required the value of an Annuity of £1 per Annum on a Male Life, aged 40, at 3 per cent. interest.

We find this, at p. 1 of the Tables, to be 16.560, or £16, 11s. 2d.

Required the value of an Annuity of £1 per Annum on the joint lives of a Male, aged 40, and a Female, aged 35, at 4 per cent. interest.

This is found under Male (Elder) and Female Life, p. 253, and is 12.454, or £12, 9s. 1d.

Required the value of an Annuity of £1 per Annum on the longest of two lives, viz., a Male, aged 40, and a Female, aged 35, at 4 per cent. interest.

This is  $A + B - A B$ .

Annuity on joint lives,  $B C$ , ..... 10.241

**A D is, therefore, by page 694,.....**

$$\begin{array}{r} 9.596 \\ \hline 48.446 \\ 32.801 \end{array}$$

<b>Value of Annuity on life of longest liver,</b>	<b>15.645</b>
---	---------------

At 4 per cent. we would find, similarly,—

P. 229. A = 19:456	P. 326. A B = -14:737	BC =	12:454
229. B = 16:410	237. A C = -13:360 = E	=	
185. C = 14:829	253. B C = -12:154	Therefore D	12:254
		Which is age 54,	
+ 50:495	- 40:551	A D =	11:420

Grouping these together, we have—

$$\begin{array}{r}
 + 50\cdot495 \\
 + 11\cdot430 \\
 \hline
 61\cdot925 \\
 - 40\cdot551 \\
 \hline
 \end{array}$$

Value of Annuity on life  
of longest liver, ..... 21·374 or £21 7s. 6d.

NOTE.—The true value of A B C is.....11·528

The value, as given above, was...11·430

$$\begin{array}{r}
 + \cdot098 \\
 \hline
 \text{Value as above.....} \quad 21\cdot374
 \end{array}$$

True value of Annuity..... 21·472 or £21 9s. 5d.

Difference.....£0, 1s. 11d.

The difference caused by approximating, in place of calculating the value of the Annuity on the three lives, is therefore very trifling, and not worth considering.

As the values of Assurances on Lives are deduced from Annuities, introducing unity and the value of £1 payable one year hence, (v) according to the Formulæ given, it appears unnecessary to give any numerical examples of the modes of finding these.

In reference to Tables I and V of Appendix, Pages 756 and 762, being Observations 15 and 8 of Mr FINLAISON's Report, and forming the basis upon which the Tables have been calculated, it may be remarked that a few trifling differences will be found on comparing these with the actual Tables given in Mr FINLAISON's Report of March, 1829. The cause of these differences is the few unimportant corrections that were required to be made on the Tables of Mr FINLAISON's Report, arising from minute errors discovered by forming the Tables in Observations 15 and 8 of new from the separate Observations of each Tontine given previously in the Report, and by checking each separate Observation independently from the materials furnished by Mr FINLAISON. The very small errors existing in the Observations 15 and 8 were thus rectified, and the Radix Tables formed from the Observations were rendered accurate,—a matter indispensable in Tables forming the basis of extensive calculations.

There has been selected, as the most useful, from their frequent application in the business of Life Annuities, Assurances, and Reversions, the following

## F O R M U L Æ

## IN ANNUITIES

Case	Value of an Annuity upon	is
1	A Single Life, . . . .	A.
2	Two Joint Lives, . . . .	A B.
